VTK Innosystem was assigned by ÁPV Rt. And DHV Hungary Ltd to carry out Phase I and II environmental audits of the one of the largest chemical industry in Hungary, TVK Rt, preceding its introduction to Stock Exchange. The Audit covered the site at Tiszaújváros, the transport lines, the wastewater treatment plant and the waste incinerator.

In Phase I we audited the legal compliance of the environmental management system of the company, and the realisation of the tasks originating from the changes in the regulations.

In Phase II we determined the location, extension and source of the environmental damages based on soil, groundwater and surface water sampling and analysis. We made recommendations for the methods of remediation of the environmental pollutions and the elimination of their sources.

All the expected costs of the proposed measures were estimated and that was used as input data for the financial audit of the company.
