Keywords: Research and development
 Innovation

Based on our accumulated professional experience and scientific background, our company carries out R & D & I activities. In the project "Recovering Metals from Wastes by Biohydrometallurgical Methods" (project No.: KFI_16-1-2017-0471), funded "Supporting R & D & I of Enterprises" (KFI_16 code), our company is working as a member of a two-member consortium. During the development task we aim to extract metals from industrial waste by cost-effective, biological methods. We carry out the design, implementation and evaluation of laboratory and pilot-scale experiments. The total amount of the grant is HUF 461 million.
